ce activin receptor-like kinases (ALK). Their discovery was based on the realisation that receptor serine/threonine kinases form a new receptor femily, which may include the type II receptors for other proteins in the transforming growth factor (TGF) beta superfamily. The activin receptor type II sequences from mouse and the dafi gene product of C.elegans have high sequence similarity and were used to design degenerate primers to clone related cDNA's (see AAQ66631-49). Six distinct putative receptor serine/threonine kinases (ALK 1-6, of which human ALK 1-5 are AAQ66631-38 respectively, and the mouse ALK-1,3,4, and 6 are AAQ66639-4 respectively) were identified mALK-3 cDNA as a probe. Two overlapping clones were identified that together covered the complete sequence of mALK-3. Products of the invention can be used in therapy, eg. to modulate conditions associated with activin or TGF beta activity. These conditions theumatoid arthritis and glomeronephritis. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes novel human and murine activin receptor-like kinases (ALK's). The novel ALK products can be used in therapy, e.g. to modulate conditions associated with activin or TGF-beta activity, such as fibrosis, e.g. liver cirrhosis and pulmonary fibrosis, cacneer, rheumatoid arthritis and glomerulonephritis. The products can also be used for detection, diagnosis and drug screening. This sequence encodes the murine mALK-3 protein isolated from clones ME-7 and ME-D
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               336

acids and the encoded proteins thereof. Specifically, it refers to receptor kinases identified as activin receptor like kinases (Alks) that are members of the transforming growth factor beta (TGF-beta) superfamily. The present invention describes a method for identifying TGF-beta inhibitors by determining whether a substance is an antibody that TGF-beta or Alk-1, in particular where that substance is an antibody that binds to TGF-beta or the extracellular domain of Alk-1. The proteins having specific serine/ threonine receptor kinase activity can be used in therapy to modulate activin or TGF-beta activity and as such can be used to treat liver cirrhosis and pulmonary fibrosis, cancer, rheumatoid arthritis or glomerulonephritis. Accordingly, they exhibit hepatotropic, antiinflammatory, respiratory-Gen, cytostatic, antirheumatic, antiarthritic and nephrotrepic activities. This polynucleotide is the murine Alk CDNA secuence of the invarior.

                                                                                                                                                                                                                                                                                                                                                                                                                                                          New bone morphogenetic protein receptor kinase protein - used for identifying cpds. capable of binding it and for developing therapeutic cpds. and detection system(s).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A cDNA library prepared from NIH3T3 poly-A RNA was screened with J159 | fragment to isolate clone BRK-1 (sequence given in AAQ90184) encoding full-length BMP receptor Kinase protein (AAR74343). Vectors including 1DNA were used to express recombinant BRK-1 in CHO and COS-7 hosts. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ValG1nG1vG1nAsnLeuAspSerMetLeuHisG1yThrG1yMetLysSerAspValAsp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CysTyrCysSerGlyHisCysProAspAspAlaIleAsnAsnThrCysIleThrAsnGly

The sequence encodes mouse bone morphogenetic protein (BMP) receptor type -I kinase-1 (BRK-1), which induces cellular differentiation in response to BMP. The gene may be inserted in plasmid pJT4, to form plasmid pJT4-J159F, and co-expressed with a type-II BRK-3 gene to study complex formation between the 2 receptor types. The BRK-3 receptor and antibodies against it may be used in diagnostic assays for BMP disorders, or in therapy to bind or scavenge BMPs. In addition, expression of the BRK-3 gene along with a reporter gene under the control of a hormone-responsive element in a cell culture may be used to screen compounds for BRK-agonist or -antagonist activity, by monitoring reporter gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /*tag= a

                                                                                                                                                                                                                                                                                                                                                              This cDNA encodes a mouse BMP receptor kinase protein (BRK)-1. This can be used in the method of the invention of determining whether a compound can bind to a bone morphogenetic protein (BMP) receptor kinase protein complex. The method comprises allowing a compound in a sample to bind to the complex, where the complex is comprised of (i) a BMP; (ii) a BRK protein; (iii) an ActRIIB receptor. The method can be used to determine the concentration of a BMP receptor ligand in a sample by comparing the binding to a standard curve prepared with known concentrations of BMP ligand. The method can also be used to determine whether a test compound produces a signal on binding to a BMP receptor protein complex. The method is useful for determining whether a ligand, such as a known or putative drug, can bind to and/or activate the receptors
                                                                                                                                                                                                                                                                                                     Screening method using bone morphogenetic protein receptor complex - which binds to potential drugs, and ActRIIB receptor used in the complex, also host cells transfected with DNA encoding the complex.

A 300 bp PCR fragment obtd. was used to screen a CDNA library prepd. from NIHT3 cells in lambda ZapII to obtain clone J159 containing DNA (AAQ90183) encoding truncated BRK-1 (AAR74342). Vectors including the DNA were used to express recombinant tBRK-1 in CHO
New bone morphogenetic protein receptor kinase protein - used for identifying cpds. capable of binding it and for developing therapeutic cpds. and detection {\rm system}(s).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 35, A Sequence 3, A Sequence 1, A Sequence 7, A Sequence 7, A Sequence 3, A Sequence 2, A Sequence 2, A
